Moody Useless Machine | Lamja.com - Microprocessor and microcontroller pages. General info. Microprocessors are essential to many of the products we use every day such as TVs, cars, radios, home appliances and of course, computers. Tue, 17 Apr 2018 23:22:00 GMT  
ePanorama.net - Links - We have discussed this before without reaching agreement as it seems to be based on how one interprets the datasheet. I'm still of the opinion that no AVR 8 bit chip would allow a total device current draw of 800ma and have never seen that total number (800ma) used in any avr datasheet.
