- Acoustics. Acoustics is the
interdisciplinary science that
deals with the study of
mechanical waves in gases,
liquids, and solids including
vibration, sound, ultrasound, and
infrasound. Tue, 17 Apr 2018

THEATER - In physics, a wave is
a disturbance that transfers
energy through matter or space,
with little or no associated mass
transport. Waves consist, instead,
of oscillations or vibrations of a
physical medium or a field,
around relatively fixed locations.

FORCES . A force is any push or
pull that causes an object to
move, stop, or change speed or

direction.; The greater the force,
the greater the change in motion
will be. The more massive an
object, the less effect a given
force will have on the object.

Reverberations occur when sound
waves strike surfaces (e.g., floors,
walls, ceilings) in a room
and are reflected back into the
space. Acoustics in Schools
